

LPU Approval Page Returns 404

Application 6854 · /lpuapprovals/create?id=6854

ROOT CAUSE CONFIRMED

Application 6854 exists. An incompatible INNER JOIN removes it from the query, then Laravel’s findOrFail() converts the empty result into a misleading HTTP 404.

Failure path

Production evidence

RECORD	ACTUAL VALUE	RESULT
Application	6854 · active · not deleted	Exists
LPU meeting	29 · LPU 214	Exists
Creator department_code	FAKULTI SAINS KESIHATAN	Text name
Application department code	A0644	Canonical match

Use the application's department identity

CURRENT — FAILS

```
ketua_ptj.kod_jabatan  
= users.department_code
```

A0644 ≠ FAKULTI SAINS KESIHATAN

Code is compared with a department name.

RECOMMENDED — MATCHES

```
ketua_ptj.kod_jabatan  
= departments.code
```

A0644 = A0644

Canonical department codes match.

Recommended query path

```
applications.department_id → departments.id → departments.code → ketua_ptj.kod_jabatan
```

Scope and verification

- Correct all three joins: create, print, and edit-letter workflows.
- Do not patch only user 71; that hides the systemic lookup defect.
- Open /lpuapprovals/create?id=6854 and verify the FSK recipient details.
- Regression-test preview, letter editing, print/export, and one known-good application.

IMPLEMENTATION PROFILE

Risk: Low
Data migration: Not required
Benefit: Unblocks LPU drafting
