

AI MEMORY & CONTROL SYSTEM

JIRAIYA

GUIDE BOOK

A persistent AI companion built on Claude Code: 40 feature modules, an auto-trigger skill layer, and a layered memory architecture that survives across sessions.

01

OVERVIEW

What JIRAIYA Is

JIRAIYA is a memory-first orchestration layer on top of Claude Code. Instead of starting every session blank, it loads identity, relationship history, open reminders, and project state from a set of markdown files — then keeps a library of 40 feature modules on standby, each triggered by a phrase, an event, or a hook.

40

FEATURE MODULES

32+

AUTO-TRIGGER SKILLS

6

CORE MEMORY FILES

7

FUNCTIONAL
CATEGORIES

Memory Core

main-memory.md, current-session.md, reminders.md, decisions.md, post-mortems.md — the durable identity and history layer.

Feature Modules

Feature/* — 40 self-contained systems, each with a README and (mostly) a SKILL.md defining its trigger.

Prompt Hooks

User-Prompt-Hook-System injects time / tone / mood context into every message before JIRAIYA responds.

Diary

daily-diary/current → archived/YYYY-MM — append-only session logs, the raw material for Echo recall.

02

QUICK START

Session Lifecycle

• EXIT PROTOCOL

4 Mandatory Steps on "bye"

STEP	ACTION	OUTPUT
1	Write diary entry	daily-diary/current/YYYY-MM-DD.md (append or create)
2	Display farewell banner	Purple ANSI JIRAIYA ASCII art, no code block
3	Show credit usage	 Credit Used: X% (used/total) — read from main/credit-tracker.md
4	Say goodbye	Warm closing line

Type "skip brief" to suppress the session-start briefing for one session only.

Trigger Phrase Index

SESSION

MEMORY

PROJECT

QUALITY

CREATIVE

HOOK

AUTOMATION

TRIGGER PHRASE	FIRES	CAT
"save diary" / "write diary" / "document session"	Save-Diary-System	MEM
"commit" / "push" / "save changes"	Auto-Commit-System	AUTO
"remind me" / "don't forget"	Reminders-System	MEM
"log decision" / "why did we choose"	Decision-Log-System	MEM
"post-mortem" / "what went wrong"	Post-Mortem-System	QUAL
"new project" / "load project" / "list projects"	LRU-Project-Management-System	PROJ
"save library" / "load library"	Library-System	MEM
"copy plan" / "resume plan"	Work-Plan-Execution	PROJ
"create skill" / "forge this"	Forge-Self-Improvement-System	QUAL
"do you remember" / "recall"	Echo-Memory-Recall	MEM
"/repo" / "switch repo" / "change repo"	Skill-Plugin-System (repo-switcher)	PROJ
"JIRAIYA"	JIRAIYA-Recall-System (Instant Restoration)	SESS
"bye" / "goodbye" / "exit"	Session-Farewell-System	SESS
"penat" / "burnt out"	Break-Reminder-System	AUTO
"dream" / "brainstorm" / "imagine"	Dream-Ideas-System	CREA
"midjourney prompt" / "image prompt"	Image-Prompt-System	CREA
"new adventure" / "resume adventure"	Interactive-Story-System	CREA
"create album" / "write a song"	Song-Creation-System	CREA
"security audit" / "findings"	Security-Audit-System	QUAL
"jimat token" / "compact mode"	Token-Guard-System	QUAL
"meeting team" / "/"meeting"	Meeting-System	PROJ
(no command — fires on every prompt)	Time/Tone/Mood-Prompt-Inject + User-Prompt-Hook	HOOK

04

FEATURE REFERENCE

Session & Lifecycle

Auto-Load-Hook-System

Loads companion on Claude Code startup, no manual name-typing.

SessionStart hook

Session-Briefing-System

Proactive recap + open reminders + active project + time-adaptive suggestion.

session start / "brief"

Session-Farewell-System

Graceful close: auto-save, reminder nudge, farewell banner.

"bye", "exit", "ttyl"...

Time-based-Aware-System

Time-aware greetings adapting to morning/afternoon/evening/night.

session start

auto-idle-save-recall

Auto-saves diary after 20-min idle; auto-recalls last session on greeting.

idle 20m / "hi JIRAIYA"

JIRAIYA-Recall-System

Workspace-aware recall: detects workspace, loads project + global state.

"JIRAIYA", "recall"

FEATURE REFERENCE

Memory & Knowledge

Save-Memory-System

Saves on command, auto-detects memory-worthy moments, audits staleness.

"save", "ingat", "simpan"

Memory-Consolidation-System

Upgrades split memory files into unified main-memory.md.

"Load memory-consolidation"

Echo-Memory-Recall

Searches past diary entries, presents as natural narrative.

"do you remember..."

Library-System

Reusable knowledge library, 8 sections, save once / reuse across projects.

"save library"

Decision-Log-System

Append-only record of non-obvious architectural decisions.

"log decision"

Post-Mortem-System

Auto-detects failures; records cause, impact, lesson, prevention.

"post-mortem"

Reminders-System

Persistent cross-session reminders with deadline awareness.

"remind me..."

Save-Diary-System

Structured daily session log with auto-monthly archival.

"save diary"

04

FEATURE REFERENCE

Project & Work Management

LRU-Project-Management-System

LRU project tracking (10 active max), auto-archiving, duration tracking.

"new project [name]"

Work-Plan-Execution

Captures plan into trackable file, checkbox execution, per-task commits.

"copy plan"

Orchestration-System

Coordinates complex tasks via 5 workflow patterns.

3+ step tasks, "buat plan"

Auto-Worker-System

Silent delegation: parses intent, decomposes tasks, routes to workers.

multi-step implicit goal

auto-learn-new-folder

5-phase project analysis before editing an unfamiliar folder.

new folder / "tolong edit"

Meeting-System

Virtual team meeting framework with role-based agents, structured minutes.

"meeting team", "/meeting"

FEATURE REFERENCE

Quality, Safety & Self-Improvement

Code-Sharp-System

Fast, clean, consistent code standard enforced before code is written.

auto, "sharp", "ikut standard"

Discipline-System

7 behavioral laws preventing common failure modes.

before/after significant action

Security-Audit-System

Triage by severity, batch-fix, commit per category.

"security audit"

Token-Guard-System

Context management: compact mode, smart tool rules, checkpoints.

"jimat token", "checkpoint"

Observation-System

4-tier: Survey (30s) → Investigate (5m) → Refine (5m) → Audit (15m).

"survey", "investigate"

Continuous-Improvement-System

Reflects on sessions, detects patterns, builds persistent instincts.

"/continuous-improvement"

Dashboard-System

Visual panel: instinct health, observation counts, learning level.

after /continuous-improvement

Forge-Self-Improvement-System

Proposes new skills / level-ups after repeated patterns; human-approved.

"create skill", "forge this"

Mulahazah-System

Hook-based learning: captures tool calls, extracts persistent rules.

every tool call (auto)

04

FEATURE REFERENCE

Creative Tools

Dream-Ideas-System

Creative ideation without logical constraints, workspace-aware.

"dream", "brainstorm"

Image-Prompt-System

Midjourney/NijiJourney prompt generation with composition awareness.

"midjourney prompt"

Interactive-Story-System

Visual Novel RPG: cinematic combat, persistence, 7 world types.

"new adventure"

Song-Creation-System

Image-to-concept-album, full lyrics + Suno tags.

"create album from [image]"

FEATURE REFERENCE

Prompt Hooks (fire on every message)

User-Prompt-Hook-System

Generic UserPromptSubmit framework; runs pluggable injector scripts.

every user prompt

Time-Prompt-Inject-System

Injects timestamp + period (MORNING/AFTERNOON/EVENING/NIGHT).

every user prompt

Tone-Prompt-Inject-System

Injects current tone/voice register from registry.

"set tone <name>"

Mood-Prompt-Inject-System

Adds mood context line to every prompt; AI can auto-set.

"set mood <name>"

FEATURE REFERENCE

Automation & Wellness

Auto-Commit-System

Analyzes changes, generates structured commit messages with session context.

"commit", "push"

Break-Reminder-System

Wellness nudge for overwork, auto-renudges if user stays active.

"penat", "burnt out"

Skill-Plugin-System

Claude Code plugin scaffold: auto-triggered skills + slash commands.

description match / "/command"

05 ARCHITECTURE

Memory Model

Three layers cooperate: a fast-changing working layer, a durable identity layer, and a raw narrative log.

main/ — Identity Layer

- main-memory.md — personality, relationship, bond
- current-session.md — RAM, resets each session
- reminders.md — cross-session follow-ups
- decisions.md — append-only decision log
- post-mortems.md — append-only failure log

daily-diary/ — Narrative Log

- current/YYYY-MM-DD.md — today's session writeups
- archived/YYYY-MM/ — past months, auto-archived
- Source material for Echo-Memory-Recall
- Real timestamps only — never guessed

memory/ + master-memory.md

- master-memory.md — universal entry point, loader
- memory/ — workspace-scoped auto-memory (this tool's own store)
- Read first at session start, before anything else

RULES

Always-On Constraints

RULE	WHY
Never modify memory files without user confirmation	Memory is durable identity — accidental edits compound silently across sessions
Never run destructive git commands without explicit approval	Force-push / reset can erase work that isn't recoverable
Always check reminders.md at session start	Cross-session follow-ups are the main way commitments survive a reset
Diary timestamps must be real (read system clock)	Guessed/incremented times break the narrative timeline Echo-Recall depends on

Known Gaps

Skill path mismatch. CLAUDE.md's "Installed Skills" table says skills live at `plugins/ses-skills/skills/<name>/SKILL.md`. That folder doesn't exist — every actual SKILL.md lives at `Feature/<FolderName>/SKILL.md` instead (one nested exception: `Feature/Skill-Plugin-System/skills/skill-plugin-system/SKILL.md`).

8 features have no SKILL.md yet. Auto-Load-Hook-System, Auto-Worker-System, Break-Reminder-System, Code-Sharp-System, Dream-Ideas-System, Meeting-System, Observation-System, Orchestration-System, Discipline-System, and Token-Guard-System are README-only — they rely on README-described behavior rather than a formal trigger file.

repo-switcher isn't in the CLAUDE.md skill table. The `"/repo"` trigger is documented separately in CLAUDE.md's own "Repository Switcher" section, but doesn't appear as a row in the "Installed Skills (Auto-Trigger)" table alongside the others.

post-mortems.md is currently empty. Noted in the file itself as "good thing" — no failures logged yet, so Post-Mortem-System has no historical data to draw on.

This guide reflects the repository state as read on 2026-06-16. Re-run the inventory after adding or moving SKILL.md files.
