

MobilitiUG End-to-End System Flowchart

Inbound student mobility — application, review, committee verification, offer and roster enrollment

System: MobilitiUG

Document: Operational Workflow

Prepared: 17 August 2026

PHASE COLOUR KEY

- Application Submission** — Applicant
- Internal Assignment** — System Administrator
- Review & Endorsement** — Faculty / PTJ Coordinator
- Final Verification** — Program Committee
- Offer, Roster & Enrollment** — Applicant & System Administrator

Solid arrows show the main journey. Split boxes show decision outcomes. Dashed boxes are return loops or side notes. Black tags mark where an ID/key is generated.

CROSS-CUTTING SYSTEM BEHAVIOUR

- › Role- and permission-based access (Spatie Laravel-Permission) controls what each participant can view or update.
- › Encrypted application IDs secure the payment return URL and the endorsement listing (see Appendix, page 2).
- › Offering token, Mobiliti ID and Program Membership ID are generated automatically at each roster stage (Appendix).
- › Automated email notifications and audit logging provide traceability across every hand-off.

PRIMARY OUTCOMES

- ENROLLED**
Active mobility member
- RETURNED**
Correction required
- DECLINED**
Closed, no further action

Prepared from the current MobilitiUG application routes, controllers, roles, and application/document statuses.

COLUMN 5 · OFFER GENERATED Key ID Offering::token	FORMAT YYYYMMDD-XXXXXX /secured/offerletter	GENERATED AT app/Models/Offering.php:46 — Eloquent creating event, fires the instant a row is saved. Screen: "Jana Token" (Generate Offer) — staff picks accepted applicants for a session and clicks Generate; one Offering row (and token) is created per student — OfferLetterController::store().	NOTE Date (YYYYMMDD) + first 7 chars of an uppercased UUID. This token is what the offer letter, its PDF and its QR code are built from.
COLUMN 5 · ROSTER CREATED Mobiliti ID MobilityStu::no_mobility	FORMAT OF_YYYYMM-XXXXXX /secured/mobilityStu	GENERATED AT app/Models/MobilityStu.php:54 — same creating -event pattern. Screen: "Jana Mobiliti" (Generate Mobility) — lists students who already have an Offering (a Key ID) but no roster entry yet, then creates one on save — MobilityStuController::store().	NOTE OF_ prefix + Year-Month + 7-char UUID slice. Requires an existing Offering (Key ID) for that student.
COLUMN 5 · MEMBERSHIP ACTIVATED Program Membership ID MobilityUser::no_mobility	FORMAT GP_YYYYMM-XXXXXX /secured/mobilityStu	GENERATED AT app/Models/MobilityUser.php:148 — fills the value only if it isn't already set. Route: POST mobilityStu/storeMobilityUser — converts a roster entry (Mobiliti ID) into an active program member — MobilityStuController::storeMobilityUser(). Members can also be added via ProgramMgtController::storeMembers().	NOTE GP_ prefix, same UUID-slice pattern. Staff can override the value manually if needed.
COLUMNS 1 & 3 · SECURE LINKS Encrypted Application ID Crypt::encryptString(\$id)	FORMAT Laravel AES (APP_KEY) application/{encrypted}/...	GENERATED AT 1) ApplicationController.php:1086 , inside UiTMPay() — Service Fee Payment (Column 1), secure return URL for the payment gateway. 2) EndorseApplicationController.php:69 , DataTable column — Department Endorsement (Column 3) listing.	NOTE Obfuscates the plain application id in URLs. Not a roster/business ID — purely a security measure.

Both Key ID and Mobiliti ID are real, code-verified identifiers — not naming artifacts. The route segments that literally say generatetoken (offerLetter/generatetoken/{sessi}/dtlistStudentEtl and mobilityStu/generatetoken/{sessi}/dtlistStudentEtl) are just the AJAX endpoints that list eligible students pulled from the ETL feed for each screen — they generate nothing by themselves. The actual token/ID is created afterwards, when a selected student is saved: Offering 's creating event writes the Key ID, and MobilityStu 's creating event writes the Mobiliti ID (rows 1 & 2 above).
